✦ STANTON · HATHOR GROUP · ORBITAL LASER PLATFORMS

Hathor OLP

Field handbook for the Hathor orbital laser platforms above Aberdeen & Daymar — a contested-zone loot raid **and** the orbital-laser mining chain. For 1–3 players.

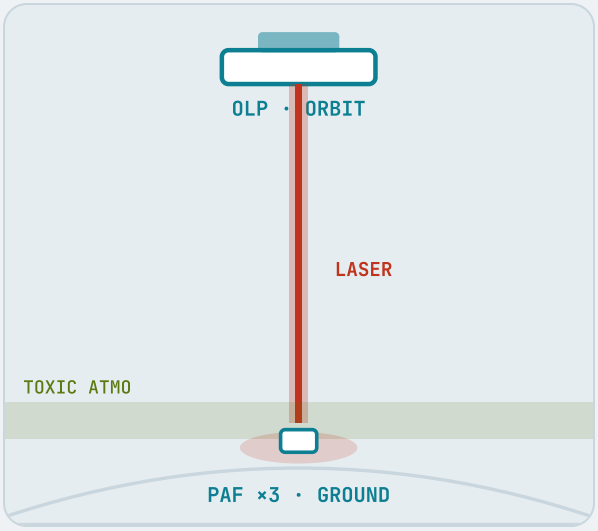

HIGH RISK · HIGH REWARD · PVPVE

DE EN ☀ ☾

SYSTEM	SITES	TEAM	TYP
Stanton	**Aberdeen · Daymar**	**1–3**	**Contested Zone**
RISK			
HOCH			

What this is: The **Hathor Group** was a (lore-wise long-dissolved) mining conglomerate. Its tool: **orbital laser platforms (OLPs)** that fired mining lasers from orbit onto moons, cracking the surface open. Today these platforms are **contested loot facilities** holding some of the best gear in the game.

Each OLP has three heavily fortified **Planetary Alignment Facilities (PAF)** on the ground that aim the laser. Firing it exposes caves — including **Carinite** (relevant for Wikelo trading).

> SEE ALSO
> Carinite & other location-locked ores (saldynium, jaclium) at a glance → event minables in the Mining guide ↗

▷ Getting in — how to start

No mission to accept. You just fly in.

THE "START BUTTON"

Contested zones are **location-based & self-initiated** — no mission giver, no mobiGlas acceptance. Pick an OLP above **Aberdeen** or **Daymar** as a quantum target, fly in, and start. Note: it's a **PvPvE zone** — other players can show up at any time.

TRACK A

📦 Loot raid

Storm the platform, clear NPC waves, open secured vaults with **access cards**, and grab top-tier gear. The faster, repeatable farm.

TRACK B

Laser mining chain

Align the ground PAFs with **alignment blades**, bring a **battery** from each up to the OLP, get the **activation keycard**, and fire from the **Control Bunker** → reveals an ore cave.

! The deadly rules

Read this first — this is where you lose gear and time.

No EVA / no jumping off

Jumping off the platform = **fatal fall** into Aberdeen's toxic atmosphere. In and out via landing pads only.

💀 Death = gear gone

On death you lose **equipped AND carried** gear/loot. Bring nothing irreplaceable; bank loot early.

🎯 Turrets on approach

Platform turrets shred ships. Approach **slow & low** and land in the turrets' blind spot.

🚪 Close doors behind you

Open doors = NPC ambush from behind. Close them consistently.

👥 Other players

PvPvE: the fattest loot draws pirates. On busy servers players camp the pads.

⚙ Patch-dependent

Layout, loot & laser steps shift per patch. Sanity-check before a run.

A Loadout checklist

◆ = mandatory · ▣ = recommended.

🚀 Ship & suit

🔫 Weapons & consumables

- **Small agile ship with a bed** e.g. the Pisces (Medical): fast, agile, a bed for quick respawn + storage for loot.
- **Medium armor** Over heavy armor — speed matters more than plating here.
- **Nothing irreplaceable** You can lose everything. Plan a throwaway loadout.

- **Reliable AR/SMG + lots of ammo** Rule of thumb: **15–20 mags** per weapon — the NPC waves are relentless.
- **Med-Pens / healing** FPS fights are long; without supplies you die between waves.
- **For track B: mining kit** Mining multi-tool or a mining ship to extract the exposed Carinite.

The sites

Four OLPs, each with three PAF ground facilities below. Explore unmarked.

ABERDEEN (HURSTON MOON)

Ruptura OLP

- Low Aberdeen orbit
- **Ruptura PAF-I / II / III** on the ground

ABERDEEN (HURSTON MOON)

Vivere OLP

- Low Aberdeen orbit
- **Vivere PAF-I / II / III** on the ground

DAYMAR (CRUSADER MOON)

Lamina OLP

- Low Daymar orbit
- **Lamina PAF-I / II / III** on the ground

DAYMAR (CRUSADER MOON)

Attritus OLP

- Low Daymar orbit
- **Attritus PAF-I / II / III** on the ground

Track A — loot raid, step by step

01
APPROACH

Approach & landing

OBJECTIVE: LAND INTACT

1. Quantum to an OLP above Aberdeen/Daymar. Come in **slow & low** to avoid the platform turrets.
2. Set down on a landing pad. **Medium/large pads** allow rearm/refuel/repair — handy as a base.

02
CLEAR

Clear the NPC waves

OBJECTIVE: SECURE ROOM BY ROOM

1. Advance in a controlled way, **close doors behind you** — otherwise NPCs flank you from behind.
2. Take out guard NPCs. Clearing them can trigger tougher **"special" guards** that carry better loot.

> WATCH FOR PLAYERS

> Stay near your ship/respawn. On busy servers pirates camp exactly here.

03 CARDS — Access cards & vaults

OBJECTIVE: OPEN SECURED AREAS

1. On guards/bodies & in rooms you find **red access cards**. Use them to open secured doors & **vaults** with the best loot.
2. Work loot boxes systematically. Manage the cards carefully — they're the key to escalating.

04 BANK — Bank & extract

OBJECTIVE: GET THE LOOT OUT

1. Move loot to your ship **early and often** — don't carry it all until the end (death = all gone).
2. Some platforms have a **trading terminal** to sell resources on the spot.
3. Fly out clean — again **stay low** to dodge turrets & camping players.

▶ Track B — fire the laser (mining chain)

5 POIs per facility: 3 PAF ground antennas, the OLP, and the unmarked Control Bunker.

B1 PAF ×3 — Align all 3 PAFs

OBJECTIVE: ONE BATTERY PER PAF

1. At each PAF, print **red keycards** from **printers** in the surrounding buildings (one is often in the dish building itself). `Red = blade rooms · blue = loot/garages.`
2. Behind the **red doors**, grab the **3 Alignment Blades** (on a table/wall near a yellow lamp).
3. Insert the 3 blades into the console on the **torn-up wall** — wait after each blade while the dish works.
4. Then the big **yellow garage door** opposite opens → take the flat **orange battery**. Repeat at **all 3 PAFs**.

B2 OLP — Install batteries & get the keycard

OBJECTIVE: LASER ACTIVATION KEYCARD

1. Fly up to the OLP. Install the 3 batteries in the **orange generators** on the large landing pads (2 per pad; some may be powered already — look for the ones with the **orange flap up**).
2. Go to the **Platform Control room**: if all is well, a **red button** appears in the center → press it and take the **Laser Activation Keycard**.

> **ENEMIES & TIMING**
> Heavy **NPC resistance** throughout; NPCs respawn after ~15 min, keycard printers have a ~15 min cooldown. An **orange printer** at the OLP also opens a loot storage room.

B3 BUNKER — Fire from the Control Bunker

OBJECTIVE: FIRE THE LASER

1. Fly down to the **Control Bunker** — **not marked on the map**, ~1 km from ground zero (almost directly below the OLP).
2. Insert the **Laser Activation Keycard** into the console, press the **big red button** → the laser fires and reveals a **cave**.

> **PAYOFF — HONEST NOTE**
> The laser reveals a cave that closes again after a while. These caves contain **Carinite** (Wikelo trade good → your Wikelo planner). **But:** at launch (4.1) the caves were still **empty** (harvestables WIP). Whether ore is present is **patch-dependent** — check your current build.

$ Loot & rewards

Drops vary by platform/patch.

ITEM	TYPE	NOTE
Military components	Ship parts	High-value grade-A/military components.
Stealth Shields	Component	Sought-after for PvP.
Armor & weapons	FPS	incl. "Volt" weapons; in rooms & vaults.
Damaged medals	Material	For crafting/upgrades.
Red access cards	Key	Open secured areas & vaults.
Carinite	Ore	From laser-exposed caves (track B). Wikelo trade good. **Presence patch-dependent** (empty at launch).

× Common ways to die

Jumped off / EVA

Fall into toxic atmo = death. Pads only.

Approached too fast

Turrets shred you. Slow & low.

Carried everything

One death → all loot gone. Bank early.

Left doors open

NPC ambush from behind. Always close.

Wore expensive gear

Lost on death. Throwaway loadout.

Solo on a busy server

No revives, easy prey for players. Safer in a duo/trio.
