📍 STAR CITIZEN · LOOT LOCATIONS · ACCESS & TRICKY SPOTS

SC Loot Locations

A growing collection of loot locations — with precise access and instructions for the tricky spots. First location: **Ghost Hollow**.

01 Ghost Hollow

Crashed Aegis Reclaimer on microTech — unmarked, Nine Tails-occupied.

`Stanton · microTech · landmark/settlement · since Alpha 3.17.2`

PVE + PVP

SYSTEM	BODY	ACCESS	HAZARD
Stanton	microTech	OM3 → N (352)	Cold · night
ENEMIES			
Nine Tails			

What this is: An Aegis **Reclaimer** crashed into forested microTech terrain; the Nine Tails have built a small settlement in and around the wreck. One of the best-designed locations in the game — **hidden loot + minor puzzles**, a respawn point with weapons/armor, and a PvP payout event via the comm array. None of it is map-marked (unless a mission takes you there).

🧭 Getting there (the first hurdle)

1. **Easiest way:** take a mission that leads here — e.g. **"Remove Illegal Occupants"** or bounty-hunting contracts → gives a quantum marker.
2. **Find it yourself:** quantum to **Orbital Marker 3 (OM3)** of microTech. From there face **North** (**Vector 352** outside atmosphere).
3. Look for a **snowy mountain with a snow-free patch** beside it. Ghost Hollow sits **to the right of the snowed peak**; the wreck's **crater/gouge trail** leads to it.

⚠ Tricky spots — how to handle them

1 Arriving without a marker

Without a mission there's **no QT marker**. Cross-reference two landmarks on approach (snow-free patch + peak) and fly the last stretch **manually & slow** — the wreck sits in a hollow and is easy to overshoot.

2 Cold & darkness

microTech is **cold**; at night Ghost Hollow is **pitch black**. Warm suit/helmet + **flashlight**. A daytime approach makes loot & enemies far easier to spot.

3 Nine Tails occupation

The settlement is **guarded** (NPCs in tents, on the wreck, in the decks). Thin them out from **high ground** / the treeline, don't rush the center. Bring spare ammo.

4 Into the wreck interior (verticality)

The Reclaimer is **torn open and tilted** — some loot is in the **slanted decks** and the ship's belly. Climb over break-edges/debris; mind the drop-offs (no EVA inside). Move carefully through the collapsed levels, don't jump into the dark.

5 Hidden boxes & minor puzzles

Loot is spread across **tents, the camp and the wreck**; some crates are **hidden** and a few spots have minor "puzzles" (detours/climb paths). Sweep everything — including off the main path. The exact box-by-box route is patch-dependent; the linked videos show it visually.

💰 Comm-array hack (PvP payout)

> WARNING: TURNS THE LOCATION "HOT"
>
> For the big credit payout you must **hack the comm array** (orbiting microTech) at the **terminal**. Once it starts, the **whole system is notified** — other players travel in and fight for terminal control. Want to just loot? **Don't hack** and stay quiet. Want the payout? Expect PvP.

👛 Loot & respawn

WHAT	WHERE
Armor & weapons	Tents, camp, wreck decks; a **respawn point with weapons & armor** is on site.
Crates / consumables	Scattered, some hidden — including inside the wreck.
Credits (payout)	Via the comm-array hack/terminal (PvP).

✅ Quick tips

- Approach by day; still bring a flashlight + warm suit.
- Thin out NPCs from range first, then loot in peace.
- Park your ship a little away & safe (PvP inbound after a hack).
- Just looting? **Don't** hack the comm array.

VIDEO WALKTHROUGH

The exact box-by-box route through the wreck is best seen in: SaltEMike – "The Ultimate Ghost Hollow Guide" and "Beginner's Guide to Looting – Ghost Hollow".

02 Derelict Outpost — Pyro IV (Terminus)

Abandoned, unmarked outposts on a lawless ice world.

`Pyro · Terminus · abandoned surface outposts · unmarked`

PVPVE · LAWLESS

SYSTEM	BODY	TYPE	HAZARD
Pyro	Terminus	Derelict outpost	–120 °C · methane
ENEMIES			
Outlaws / PvP			

What this is: Terminus (Pyro IV) is a barren, freezing outlaw world. Scattered across the surface are **abandoned outposts** — some unmarked — with **loot crates** (weapons, armor pieces, multi-tools, medical supplies). No mission needed, but **heavily RNG-based**, and Pyro is **free fire**.

NUMBERING

In-game/community, Terminus is **Pyro IV**; the wiki infobox sometimes says "Pyro VI" (numbering has been inconsistent). Same world — Ruin Station in orbit.

🧭 Getting there & finding them

1. Quantum to **Terminus**. The **marked** settlements (e.g. Last Landings, Rough Landing, Canard View) are inhabited/Headhunters — the **abandoned outposts** are the unmarked ones in between.
2. Unmarked outposts only appear **on approach**: fly low & systematically over the surface, or use a mission (bounty/clear) as a pointer.

⚠ Tricky spots — how to handle them

1 Extreme cold & methane

Storms hit **–120 °C**, methane atmosphere. **Cold/environment suit + helmet (oxygen)** is mandatory; watch your temperature, don't linger outside. At night add a flashlight.

2 Lawless — outlaws & PvP

Pyro has **no security**: NPC outlaws on site and **other players** any time. Don't leave your ship exposed, plan an exit, carry nothing irreplaceable.

3 Picked clean & RNG

Popular outposts are often **already looted**, and loot is **heavily random**. Fix: sweep **several outposts** and, if needed, **server-hop** (switch region / relog) for fresh crates. Off-peak helps.

4 Landing on rough terrain

No proper pad at unmarked outposts — land on flat ground nearby, but not **inside** the outpost (collision/theft). Mind gear/incline, keep the ship in view.

🎒 Loot

WHAT	NOTE
FPS weapons	incl. P6 sniper rifle; railgun (rare).
Armor pieces	Various sets from equipment crates (RNG).
Multi-Tools · med supplies	Handy consumables.

✅ Quick tips

- Cold/environment suit + oxygen helmet; watch temperature.
- Several outposts per trip; server-hop when crates are empty.
- Off-peak & solo/small group = less PvP competition.
- Carry nothing irreplaceable — Pyro is lawless.

HONEST NOTE

"Derelict outpost" is a **generic, unmarked POI type** — there are several on Terminus, layout & loot vary and are patch-dependent. Specific outposts & the current server-hop method are in the MMOPIXEL looting guide (source).

03 Cry-Astro Processing Plants — microTech

Restricted distribution center — infiltration & loot raid.

`Stanton · microTech · distribution center (Cry-Astro) · e.g. 19-02, 34-12`

GUARDED · "NO PUBLIC ACCESS"

SYSTEM	BODY	TYPE	ACCESS
Stanton	microTech	Distribution Center	Trespassing
ENEMIES			
NPC guards			

What this is: Cry-Astro-owned **distribution centers** on microTech ("a vital part of Cry-Astro's fuel network — **no public access**"). As a **guarded, restricted** facility it plays like a hostile DC: get in, take out guards, grab **access cards**, loot the **orange crates** (armor/items/components), extract clean.

🧭 Getting there

1. On **microTech**; the plants are map landmarks (e.g. **19-02**, **34-12**). Fly in and **land away from the main guards** — enter quietly, not into the middle.

⚠ Tricky spots — how to handle them

1 "No Public Access" — CrimeStat

Entering counts as **trespassing** and can trigger a **security response / wanted level**. Approach quietly, land off to the side, and plan for the wanted status on the way out.

2 NPC guards

The facility is **guarded**. Take out or bypass guards; bring **medium/heavy armor + a solid FPS weapon + healing**.

3 Locked doors & access cards

Interior crates sit behind **locked doors**. Collect **access cards** from NPCs/rooms and use the **elevators/security checkpoints** to reach the interior.

4 The 7 orange loot crates

Typical DC layout: **2× outside** (one per side) · **2× down in the work area** · **2× at the side security checkpoints of the interior elevators** (behind doors) · **1× up between the VIP rooms** on the lobby upper floor. Sweep them all.

5 Armor spawns scattered (RNG)

Armor pieces (helmet/core/arms/legs) often spawn **individually/scattered** → a full set usually takes **several runs / server-hopping**. Plus microTech cold & PvP risk.

🎒 Loot

WHAT	NOTE
Armor (heavy)	DCs are a top source for heavy sets like **Palatino** ("Battle Tech", full helm) — often scattered.
Items & components	From the orange crates (RNG).
FPS weapons / consumables	On guards & in rooms.

✅ Quick tips

- Land off to the side, enter quietly; plan for the wanted level on exit.
- Sweep all 7 crate spots; for full sets do several runs / server-hop.
- Medium/heavy armor, FPS weapon, med-pens; microTech = cold.

> **HONEST NOTE**
> Cry-Astro plants are a **DC type** — the 7-crate layout & Palatino loot is the general DC pattern; positions/loot vary by facility & patch. Full DC list & maps: SC Wiki "Category: Distribution Centers".
