❄ NYX SYSTEM · GLACIEM RING / KEEGER BELT · "ROCK CRACKER"

QV BREAKER STATIONS

Field handbook for Operation Rock Breaker (4.7+): reboot a frozen QV station, align the refractors and fire the giant laser that cracks the asteroid open. FPS + mining + puzzles.

COLD · LOOT · 1–4 PLAYERS

SYSTEM	OPERATOR	MODE	TEAM
Nyx · Keeger	QV Planet Services	Exclusive = PvE	1–4

ENVIRONMENT
~−70 °C

What this is: The **QV Breaker Stations** in the Nyx asteroid belt (Glaciem Ring / Keeger Belt) were built by **QV Planet Services** to crack asteroids with a giant laser and reach the ore inside. The facilities are derelict & frozen — your job: **reboot** the station, align three **refractors**, craft/load **lenses & catalysts**, and **fire the laser**. Then you mine the exposed ore.

> SEE ALSO
> **Sadaryx** exists only here — overview of all location-locked ores → event minables in the Mining guide ↗

Contract: **mobiGlas → Contract Manager → "QV Breaker Station mining rights"** (Nyx). **Exclusive = PvE** (recommended, no interference), **Shared = PvP**.

> LETHAL: COLD
> **Cold-protection armor (to ~−70 °C) or an environment suit is mandatory** — without it you freeze before the run ends. The single most important item.

▷ Getting in — how to start

You buy the mining rights — two paid variants.

PREREQUISITE

First reach **Contractor reputation with Shubin Interstellar** (Jr. Contractor is enough; ~90 min via hand-mining + cargo-delivery contracts). Then, in **mobiGlas → Contract Manager → Ship Mining tab** (Nyx), accept the **"QV Breaker Station mining rights"** contract — it **costs aUEC** (you pay for the rights).

🔹 Exclusive — 850,000 aUEC

Recommended. PvE — the station is yours alone, no interference. Pricier but safe.

👥 Shared — 175,000 aUEC

Cheaper but **PvP**: other crews can also buy in; resources are first-come, first-serve.

SHORT WINDOW

The contract has a tight accept/run window (like many) — accept and launch promptly, don't sit on it.

A Loadout checklist

◆ = mandatory · ▣ = recommended.

🧥 Suit & tools

- ◆ **Cold protection / environment suit** To ~−70 °C — or you freeze.
- ◆ **Multi-Tool: mining head (OreBit) + MaxLift tractor gun** Mining head for Sadaryx; tractor beam for batteries, lenses, catalysts.
- ◆ **≥ 10 fuses** For powered doors/systems — too few = stranded behind dead doors.

🔫 Combat & ship

- ◆ **Weapon + plenty of ammo** Serious FPS combat (NPCs + fauna in the dark).
- ▣ **Med-Gun / Med-Pens · RMC + empty canisters** Healing; RMC for some repairs.
- ▣ **Mining ship + bed** Prospector (solo) / Mole (group) for the final asteroid mining; a bed = respawn.

! The deadly rules

Read first — this is where runs die near the finish.

❄ No cold protection

You freeze before the end. The suit is mandatory.

🔌 Too few fuses

Stranded behind dead doors. Bring ≥ 10.

🔋 Installed batteries one by one

💥 Volatile rocks

A server crash resets progress — collect **all 4** first, then install.

Without mining gadgets = an explosion ends the run. Defuse them.

⏱ Sadaryx too late

Long backtracking. Mine it on your first pass.

🌰 Lost momentum

Too much delay and the station malfunctions again. Keep moving.

▶ The run

Goal: 3 lenses · 4 catalysts · 12+ Sadaryx · fire the laser.

1 Approach & restore power

POWER

OBJECTIVE: REACTOR ONLINE

1. Quantum to ~50 km, fly the rest manually. Land on the **2 pads under the laser emitter**, in through the maintenance airlock. (Tram button lit? → someone's already inside.)
2. Find **4× PGR batteries** in the mining area (on yellow old machinery; one under the frozen "spider" mine in Section One — open the door with a fuse). Tractor them into the reactor rack (4 slots). ⚠ **All 4 first, then pull the lever.**

2 Note codes & mine Sadaryx

SADARYX

OBJECTIVE: CODES A/B/C · 12+ SADARYX

1. Note the **refractor codes** at the terminals (CCTV): on the ring · in Section One · near the laser. Read every terminal on first pass — saves backtracking.
2. **Mine ≥ 12 Sadaryx** (4 per lens × 3). Do it now — see the Sadaryx box below.

> SADARYX
>
> **Where:** in the marked tunnel doors of the mining area / Section One. **Looks like:** pale whitish geodes (violet-gold shimmer), almost always next to bright **blue-violet Aphorite** — Aphorite is your signpost. ~2 per node. Clear ice/rubble with laser/weapon/grenade. **Wikelo link:** Sadaryx is a Wikelo trade ore → your Wikelo planner.

3 Restart Operations & refractors

OPS

OBJECTIVE: A/B/C ALIGNED

1. Take the **tram** to the **Operations platform** on the ring, clear NPCs, control console → **restart** (this also gives the **Refractor-C code**).
2. Drive to the three **refractors A/B/C** by tram and enter the codes → they align.

4 Craft lenses & laser room

LENSES

OBJECTIVE: 3 LENSES INSTALLED

1. **Secure the laser room** — heavy FPS combat here, clear it first.
2. At the **fabricator** (right of the laser entrance), **4 Sadaryx = 1 lens → 3 lenses**. Tractor them into the assembly (number red→white = seated). On a failure just repeat (spare Sadaryx!).

5 Catalysts from storage

CATALYST

OBJECTIVE: 4 CATALYSTS LOADED

1. Take the **tram/monorail** to the **Storage Depot**. Unlock the storage arms in the admin office (keycard = bonus loot; the **Refractor-A code** is here too).
2. Take **4× lasing catalysts** and bring them **all back with the tractor gun** (don't run multiple times) → install all 4.

6 Fire the laser & final mining

FIRE

OBJECTIVE: CRACK THE ASTEROID & MINE

1. Once all refractors are aligned & all parts loaded: at the **control booth behind the emitter**, hit the **red button** → the asteroid cracks open. 🎉
2. Carefully fly into the **hot fracture tunnel** (walls damage the ship), mine the ore with your mining ship — **defuse volatile rocks** with mining gadgets.

> UI BUG
>
> The display sometimes shows a **wrong refractor status** even when everything is seated — fire anyway.

$ Reward & loot

ITEM	SOURCE	NOTE
Contract blueprint	Completion	1 random blueprint (pool incl. R97 shotgun variants, Monde Arms camo) — use it at your home crafting machine.
Rare materials / ore	Final mining	From the cracked asteroid core.
Sadaryx	Mining	**12+** — surplus for the next run & as Wikelo trade ore.
Optional loot	Keycards	From NPC bodies/desks → optional loot rooms (e.g. storage admin).
